

ELPRO 115S - Industrial Serial I/O

Flexible serial I/O with multiple application modes:

Serial I/O multiplexer - transfer I/O via RS485 multidrop using WIBNet exception reporting protocol.

Expansion I/O for ELPRO 105U/905U wireless I/O units - up to 31 x 115S units can be connected to each wireless unit via RS485.

Modbus I/O - up to 99 x 115S units can be connected to each Modbus Master.

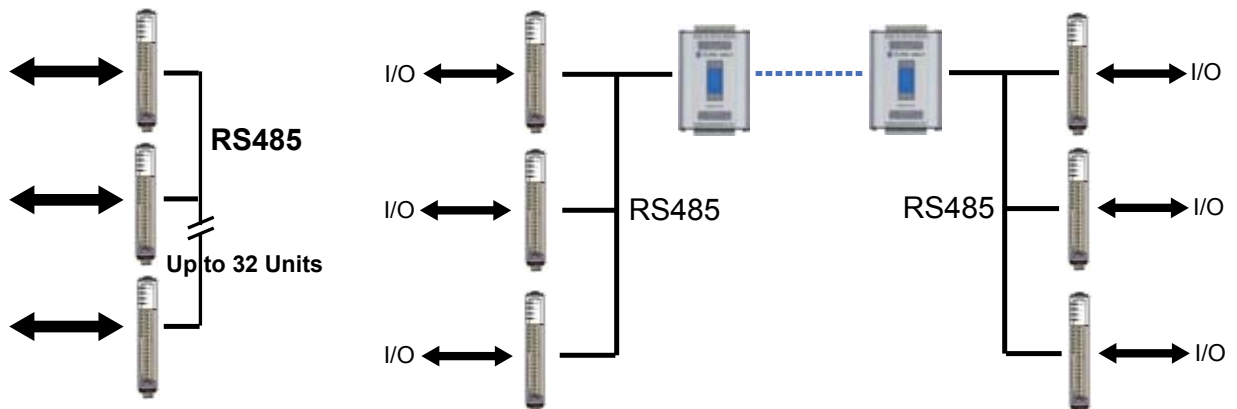

I/O interface for ELPRO 802.11 wireless Ethernet and Serial Server units - up to 99 115S units per wireless units.

Features:

- Selectable communications protocol - Modbus (RTU and ASCII) or WIBNet (exception reporting, peer to peer with security encryption).
- Three I/O versions available:

115S model	115S-11	115S-12	115S-13
Digital input/outputs	16	8	8
Analog inputs	0	4/8	0
Analog outputs	0	0	8
Pulse inputs	4	0	0
Pulse outputs	8	8	8

- Each model has 8 (115S-11 has 16) digital I/O channels - each channel can be used as a volt free contact input or FET output (30VDC, 0.2A maximum)
- Each DIO channel can function as a pulse output to a maximum 15Hz with the first four DIO/pulse input channels on the 115S-11 to a maximum pulse rate of 1KHz. Pulse inputs provide both totalized count and pulse rate as separate values.
- Configurable analog inputs - 0-20/4-20mA: 0-10V. Selectable as 8 single terminal inputs (commoned) or 4 dual terminal 'floating' inputs (115S-12).
- Analog outputs are commoned with selectable 'supply' or 'sink' connections (115S-13).
- Each analog input has a high/low set point to determine a set-point status.
- Field test and display I/O inputs and/or force outputs, monitor and confirm communications and configure units with user friendly configuration software.
